

# DBAudit Trails™

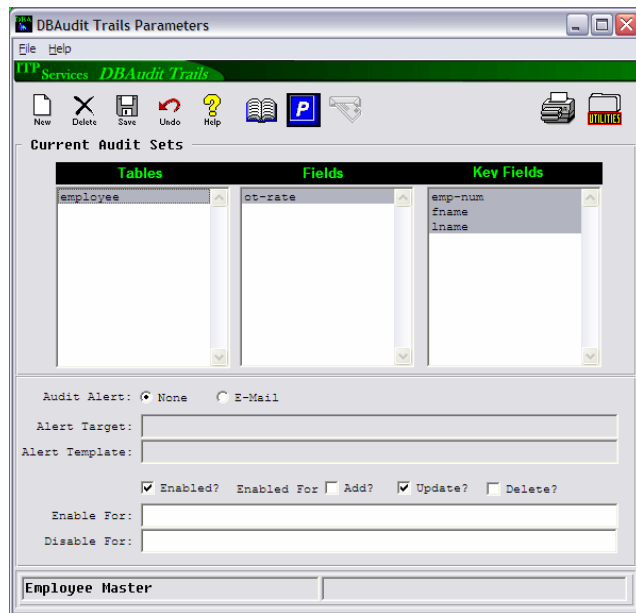

© ITP Services, Inc.

**A SIMPLE, EASY TO USE AUDIT TRAIL UTILITY FOR ANY PROGRESS DATABASE**  
*(Available for both Windows and Unix environments)*

ITP Services, Inc. offers a unique solution to auditing Progress database changes called **DBAudit Trails**. **DBAudit Trails** is a standalone utility that allows you to automatically audit changes to any Progress Database.

**DBAudit Trails** can provide the following benefits to your company:

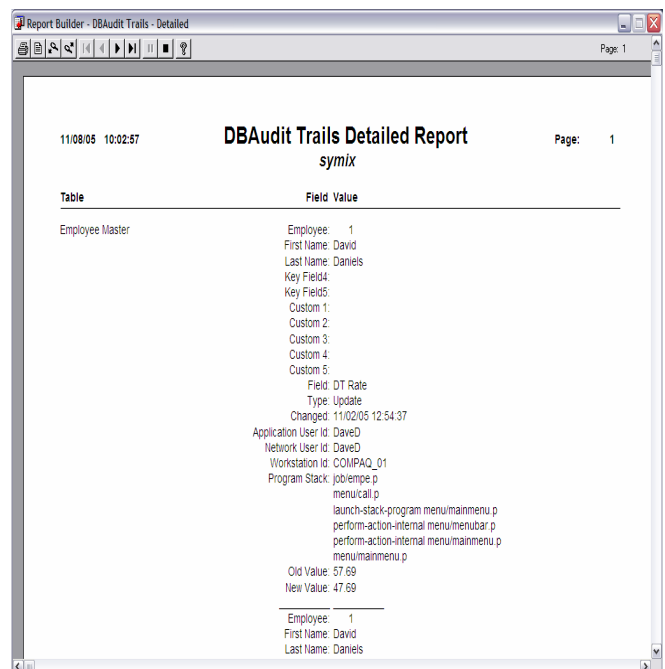

- Helps you adhere to the Sarbanes-Oxley Act section 404 for documenting internal controls.
- Protects sensitive information.
- Insures correct system behavior.
- Provides an additional level of protection above what is offered as a standard feature in most packages such as SyteLine and MFG/PRO.
- Reduces time spent manually monitoring database changes and system behavior.
- Provides real-time alerts to instantly advise you when changes are made.

Please [contact](#) ITP Services, Inc. for a detailed **sales brochure and demonstration** of the advanced auditing capabilities of the **DBAudit Trails** product.

## Feature Summary:

- Configurable e-mails by audit event allows you to customize the real-time message sent as audit events are detected. You specify the text of the e-mail message including up to 16 fields that are replaced with actual data values at the time of the audit event. This feature is sometimes used as a form of workflow. Using this feature, you can have different e-mail messages for each table and field change you are tracking.
- User-customized change type tracking monitors only the change types you request, including add, delete and update.
- User-customized table and field tracking, monitors changes to any field in any table you request.
- Detailed information on every change including network ID, workstation ID, login ID, old value, new value, program name, audit date and time and table and field name.
- Easy to maintain separate database including a purge option.
- Installs without any modifications to existing databases or program code. **DBAudit Trails** generates and automatically attaches triggers to enable auditing (automatic attachment in Windows environments only).
- User-customized on screen and hardcopy reports including the ability to list five key fields with the field being audited to provide more information on the event.

**DBAudit Trails** Installation and Pricing:

- **DBAudit Trails** can be customer installed but ITP installation services are also available and recommended
- Requires Progress 9.0 or above
- Product Pricing: \$1,999 per site
- Maintenance and Support: 15% annually
- Sales tax where applicable
