Dear IT or Manufacturing Professional:

My name is Dave Dahlinghaus. I am President of ITP Services, Inc. located in Dayton, Ohio. The purpose of this letter is to briefly describe **TrackSmart**[®], a software product designed specifically for precast, prestressed concrete manufacturers. **TrackSmart** can be used to track structural panels and walls in both form-based and bed-based manufacturing environments.

TrackSmart contains the following modules:

- ✓ Job Tracking
- ✓ Inventory Control
- ✓ Production Scheduling
- ✓ Yard Control
- ✓ Scrap Reporting
- ✓ Job Costing

These modules are totally integrated and function together to give you unprecedented control over your manufacturing environment. **TrackSmart** has been developed using the Progress[™] database and 4th generation language. ITP Services, Inc. is a business partner of Progress Software Corporation.

In addition to **TrackSmart**, ITP Services, Inc. provides consulting services in the following areas:

- ✓ WEB design and development
- ✓ Network design and implementation
- ✓ Application design and development using the Progress database and 4GL and Visual Basic

If you qualify for the ITP Services, Inc. Business Partner Program, you are entitled to potentially significant discounts on **TrackSmart**. Participation in the ITP Business Partner program requires that your company agree to actively support the **TrackSmart** sales effort by serving as a customer site reference. This participation generally includes phone calls and/or site visits by prospects.

I have included a brochure on the **TrackSmart** product. If you feel that ITP Services, Inc. can help you with your manufacturing and IT needs, please call today.

Regards,

David A. Dahlinghaus
President
